Please find below and/or attached an Office communication concerning this application or proceeding.

The time period for reply, if any, is set in the attached communication.

Office Action Summary

Application No.

09/753,307

Applicant(s)

DOTY ET AL.

Examiner

Karen L. Le

Art Unit

2614

-- The MAILING DATE of this communication appears on the cover sheet with the correspondence address --

Period for Reply

A SHORTENED STATUTORY PERIOD FOR REPLY IS SET TO EXPIRE 3 MONTH(S) OR THIRTY (30) DAYS, WHICHEVER IS LONGER, FROM THE MAILING DATE OF THIS COMMUNICATION.

- Extensions of time may be available under the provisions of 37 CFR 1.136(a). In no event, however, may a reply be timely filed after SIX (6) MONTHS from the mailing date of this communication.
- If NO period for reply is specified above, the maximum statutory period will apply and will expire SIX (6) MONTHS from the mailing date of this communication.
- Failure to reply within the set or extended period for reply will, by statute, cause the application to become ABANDONED (35 U.S.C. § 133). Any reply received by the Office later than three months after the mailing date of this communication, even if timely filed, may reduce any earned patent term adjustment. See 37 CFR 1.704(b).

Status

- 1) ☐ Responsive to communication(s) filed on 15 October 2007.
- 2a) ☒ This action is **FINAL**. 2b) ☐ This action is non-final.
- 3) ☐ Since this application is in condition for allowance except for formal matters, prosecution as to the merits is closed in accordance with the practice under *Ex parte Quayle*, 1935 C.D. 11, 453 O.G. 213.

Disposition of Claims

- 4) ☒ Claim(s) 1-19 is/are pending in the application.
- 4a) Of the above claim(s) _____ is/are withdrawn from consideration.
- 5) ☐ Claim(s) _____ is/are allowed.
- 6) ☒ Claim(s) 1-19 is/are rejected.
- 7) ☐ Claim(s) _____ is/are objected to.
- 8) ☐ Claim(s) _____ are subject to restriction and/or election requirement.

Application Papers

- 9) ☐ The specification is objected to by the Examiner.
- 10) ☐ The drawing(s) filed on _____ is/are: a) ☐ accepted or b) ☐ objected to by the Examiner.
Applicant may not request that any objection to the drawing(s) be held in abeyance. See 37 CFR 1.85(a).
Replacement drawing sheet(s) including the correction is required if the drawing(s) is objected to. See 37 CFR 1.121(d).
- 11) ☐ The oath or declaration is objected to by the Examiner. Note the attached Office Action or form PTO-152.

Priority under 35 U.S.C. § 119

- 12) ☐ Acknowledgment is made of a claim for foreign priority under 35 U.S.C. § 119(a)-(d) or (f).
- a) ☐ All b) ☐ Some * c) ☐ None of:
- ☐ Certified copies of the priority documents have been received.
 - ☐ Certified copies of the priority documents have been received in Application No. _____.
 - ☐ Copies of the certified copies of the priority documents have been received in this National Stage application from the International Bureau (PCT Rule 17.2(a)).

* See the attached detailed Office action for a list of the certified copies not received.

DETAILED ACTION

1. This action is final.

Claim Rejections - 35 USC § 103

2. The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negated by the manner in which the invention was made.

3. Claims 1-19 are rejected under 35 U.S.C. 103(a) as being unpatentable over Chong et al. (U. S. 6,205,557) in view of Denby et al (US 6,976,062).

Regarding claims 1 and 9, Chong teaches a method and a computer-readable medium for switching active calls between entities (fig.3, server 140 and server 141 of database 103) on a network device (Fig. 2, item 103), the method comprising:

collecting information about a current call on the first processor while the current call is being processed by a first entity (Fig. 3, server 140 and col. 5, lines 7-16), initializing a second processor (Fig. 3, server 141) residing in the network device with the first processor (Col. 5, lines 22-23) with the information while the current call is being processed on the first processor, switching the current call from the first processor to the second processor; releasing the first processor from further processing of the call, and repeating the switching of call from the first processor until the first processor is free for maintenance (Col. 5, lines 18-19 and lines).

Chong does not teach determining that a time has been reached for an upgrade of firmware on a first processor that is still actively handling calls. However, Denby teaches determining that a time has been reached for an upgrade of firmware on a first processor that is still actively handling calls (See Col. 1, lines 64- Col. 2, lines 46). Denby teaches the automated software upgrade utility allows a customer, product supplier or software vendor to upgrade the operating system, firmware, applications and data files on any product. The upgrade utility may reside with the product supplier and periodically locate remote products and perform the upgrade process. Thus it would have been obvious to one of ordinary skill in the art at the time the invention was made to incorporate the teach of Denby into Chong's system in order to determine that an upgrade time has arrived. When the detection method in Chong is applied earlier (apply before the processor is failed) then all calls that are transferred will also include all active calls at the time the second server is being initialized. It is extremely old and well known in the art of telephony (and other arts) that when a unit needs upgrading, other unit(s) should "take over" any function(s) of the unit to be upgraded.

Regarding claims 2-4 and 15-18, Chong teaches the processors are digital signal processors located within the same module, the processors are located in different modules located on the same card, and the processors are located on different cards in the network device (Fig.2, DB 103; Fig. 3, server 140 and 141; Fig. 4, processors 170 of 140 and 141).

Regarding claim 6, Chong further teaches initializing a second processor further comprises initiating a retrain sequence on the second entity (Col. 5, lines 22-30).

Regarding claim 7, Chong further teaches the information about a current call includes modulation (Col. 2, lines 43-44)

Regarding claims 10 and 11, Chong further teaches the computer-readable medium comprises a downloadable file and image file upload able into digital signal processor (Col. 6, lines 56-67).

Regarding claims 12 and 14, Chong further teaches a network device, comprising: at least two means for handling active calls residing in the network device (fig.3, item server 140 and server 141 of database 103 and Fig. 1, switching network 100), a means for connecting the means for handling active calls with means for transmitting phone calls (col. 5, lines 16-19); a means for switching active calls from a first processing means for handling active calls to another processing means for handling active calls without interruption, thereby eliminating any active calls on the first means for handling active calls and freeing the first processing means for maintenance (Col. 5, Lines 23-32 and Col. 1, Lines 5-10).

Chong does not teach a means for determining that a time has been reached for an upgrade to a first processing mean that is actively handling calls. However Denby

teaches a means for determining that a time has been reached for an upgrade to a first processing mean that is actively handling calls (See Col. 1, lines 64- Col. 2, lines 46).

Denby teaches the automated software upgrade utility allows a customer, product supplier or software vendor to upgrade the operating system, firmware, applications and data files on any product. The upgrade utility may reside with the product supplier and periodically locate remote products and perform the upgrade process. Thus it would have been obvious to one of ordinary skill in the art at the time the invention was made to incorporate the teach of Denby into Chong's system in order to determine that an upgrade time has arrived. When the detection method in Chong is applied earlier (apply before the processor is failed) then all calls that are transferred will also include all active calls at the time the second server is being initialized. It is so simple to understand that it is depend on when detection method is applied (before or after the processor is failed) to provide the maintenance or repairing.

Regarding claim 13, Chong further teaches the device of claim 10 wherein the controller is part of a processor located on one of the entities (Fig. 2, item 103).

Regarding claim 19, Chong further teaches the means for switching active calls further comprises a controller (Fig. 2, item 103).

4. Claims 5 and 8 are rejected under 35 U.S.C. 103(a) as being unpatentable over Chong et al. (U. S. 6,205,557) in view of Denby et al (US 6,976,062) and further in view of Zeck (US 2002/0101605).

Regarding claims 5 and 8, Chong does not teach the steps of copying compression dictionary tables from the first entity and loading compression tables in the second entity. However, Zeck teach the steps of copying compression dictionary tables from the first entity and loading compression tables in the second entity (See Paragraph 24 and 25). Zeck teaches a method for compressing and decompressing electronic documents, with improved compression and reduced history memory size requirements. Thus, it would have been obvious to one of ordinary skill in the art at the time the invention was made to incorporate the dictionary compression method of zeck into Chong's system in order to compress and decompress data while transmission to have larger volume of data.

Chong does not teach the information about a current call includes country code. However, each country uses different carriers, thus it would have been obvious to one of ordinary skill in the art at the time the invention was made to include type of country code to verify what type of carrier that country uses. Information about country code are old and well know in telecommunication system.

Response to Arguments

Applicant's arguments filed 10/15/07 with respect to claims 1-19 have been fully considered but they are not persuasive.

As to Applicant's remarks, Applicant mainly argues that Chong does not teach initializing a second processor while a current call is being processed on a first processor, and does not teach repeating the transfer of calls. Denby does not teach initialization a second processor and transferring calls. Examiner respectfully disagrees for the following reasons: Chong did teach initializing a second processor and transfer calls from active call server to standby call server when active call server failure. Denby teaches automated upgrading process and periodically query the product supplier for firmware upgrades. Denby is the secondary reference, and it does not have to be bodily incorporated in the primary reference. When the detection method in Chong is applied periodically as teaches by Denby, then the active call server is still in good working condition when a second processor (or standby processor) is initialized and transferring all calls to second processor will happen without any problems. . This is simply that when a unit needs upgrading, other unit should take over any function(s) of the unit to be upgrade.

Applicant further argues that Zech does not teach copying compression dictionary tables from a first entity into a second entity. Examiner respectfully disagrees for the following reason: Zech does teach dictionary compression method. Chong teaches transferring calls from first entity to second entity. Thus, it would have been obvious to one of ordinary skill in the art at the time the invention was made to incorporate the dictionary compression method of Zech into Chong's system in order to compress and decompress data while transmission to have larger volume of data.

Again, Zech is the secondary reference, and it does not have to be bodily incorporated in the primary reference.

For above reasons, Chong, Denby and Zech are maintained for supporting the enclosed Examiner's Final action.

Conclusion

5. **THIS ACTION IS MADE FINAL.** See MPEP § 706.07(a). Applicant is reminded of the extension of time policy as set forth in 37 CFR 1.136(a).

A shortened statutory period for reply to this final action is set to expire **THREE MONTHS** from the mailing date of this action. In the event a first reply is filed within **TWO MONTHS** of the mailing date of this final action and the advisory action is not mailed until after the end of the **THREE-MONTH** shortened statutory period, then the shortened statutory period will expire on the date the advisory action is mailed, and any extension fee pursuant to 37 CFR 1.136(a) will be calculated from the mailing date of the advisory action. In no event, however, will the statutory period for reply expire later than **SIX MONTHS** from the date of this final action.

6. Any inquiry concerning this communication or earlier communications from the examiner should be directed to Karen L. Le whose telephone number is 571-272-7487. The examiner can normally be reached on Mon and Thurs: 8:30-5:00.

If attempts to reach the examiner by telephone are unsuccessful, the examiner's supervisor, Ahmad F. Matar can be reached on 571-272-7493. The fax phone number
